

STATEMENT OF INTENT

BCEGI recognises the importance of minimising the impact of its activities on the environment and is committed to eliminating incidents of pollution whilst continually reducing the environmental footprint associated with delivering its business operations. As part of this duty BCEGI will operate its business in compliance with its obligations under all applicable environmental Regulations and - where appropriate - relevant best practice standards and industry codes.

In support of this commitment BCEGI will routinely evaluate its environmental aspects and impacts in order to reduce the waste it produces and energy it consumes, whilst protecting the natural environment at its project and office locations and promoting the use of sustainable materials and technologies throughout its supply chain. This includes providing instruction and training to its people to enable work to be carried out sustainably, and without adverse impacts on the environment.

RESPONSIBILITIES

Responsibility for this Policy ultimately lies with the BCEGI Lead Director, supported by the Management Team and SHEQ Lead who are responsible for the implementation of the Policy Statement and all associated Management Standards. The Management Team - supported by Project Managers - must at all times demonstrate proactive and visible leadership in relation to environmental management and are responsible for communicating BCEGI environmental objectives throughout the organisation, whilst ensuring that effective arrangements are in place at a Project level. This Policy and associated Management Standards are mandatory across all BCEGI operations and as such all BCEGI Employees and Stakeholders are expected to comply with all related arrangements.

ARRANGEMENTS

Arrangements for the management of its environmental aspects are contained within the BCEGI Integrated Management System (IMS), and are made available to all employees, supply chain partners and affected parties. This policy is subject to continual review to ensure that it remains relevant to the scope of BCEGI operations and to account for changes in its working practices.
